

Amey Sawant . Jarvis Consulting

I am a results-driven Business Systems Analyst with over 3 years of experience in the IT industry. I recently completed my post-graduation in Information Systems Business Analysis from George Brown College. I am proficient in defining and documenting Software Requirements Documents (SRD) and Business Requirements Specifications (BRS) to ensure alignment between business needs and technical solutions. I have hands-on experience with Azure Cloud Services, enabling me to optimize business processes and improve system scalability. Additionally, I am skilled in data analytics using SQL to query and manipulate large data sets. I worked extensively with Snowflake to manage cloud-based data warehousing solutions, optimizing performance through efficient data modelling and storage practices. My ability to bridge the gap between business and IT allows me to deliver technical solutions that drive operational efficiency and success.

Skills

Proficient: Azure Data Factory, Jenkins CI/CD, Azure DevOps, SQL/RDBMS, Power BI, Docker

Competent: Snowflake, Selenium Web Driver, Linux Scripting, C/C++ Programming, Azure Kubernetes

Familiar: Postman, Java, HTML, UI/UX, GCP

Jarvis Projects

Project source code: https://github.com/jarviscanada/jarvis_data_eng_AmeySawant

Cluster Monitor [GitHub]: Implemented a comprehensive Linux cluster monitoring solution utilizing Bash scripts to gather detailed hardware specifications and resource usage data from each server. This data is systematically collected and stored in a PostgreSQL database, which is provisioned using Docker for easy deployment and management. The monitoring scripts are scheduled to run periodically using crontab, ensuring continuous data collection. SQL queries are then employed to analyze the stored data, providing valuable insights into the cluster's performance and resource utilization.

Coca-Cola sales data analytics dashboard using Power BI [GitHub]: I developed an interactive sales analytics dashboard using Power BI to analyse regional sales performance. I connected Power BI to a large dataset containing sales figures, customer demographics, and distribution channels from various regions. Using Power Query, I cleaned and transformed the data for accurate analysis. I then designed dynamic visualizations including sales trend analysis, regional performance comparisons, and product category breakdown.

Highlighted Projects

Azure cloud-based data warehousing | Tech Mahindra Innovation Labs: I designed and implemented a data warehousing solution using Azure cloud for a telecom client to centralize reporting and analytics. The project involved setting up Azure Data Factory (ADF) to ingest and transform data from various sources, including on-premises databases and cloud-based APIs into an Azure SQL Data Warehouse. Azure Blob Storage was utilized for staging raw data, while Power BI was integrated to visualize the processed data.

CI/CD pipeline implementation for a web application using Azure DevOps: Built CI/CD pipeline for a web application called TechConnect completely hosted on Azure. The pipeline was designed to automate code integration, testing and deployment processes, ensuring efficient and reliable application delivery. The web application was containerized using Docker and deployed on Azure Kubernetes Services (AKS).

Professional Experiences

Business Systems Analyst, Jarvis Consulting Group (May 2024 - Present): As a Business Systems Analyst at Jarvis, I am currently enrolled in a training program where I have gained hands-on experience in several key areas. I worked on a Linux cluster monitoring project, utilizing SQL for data analysis and creating comprehensive Business Requirements Documents (BRD) and System Requirements Documents (SRD). This role has enhanced my technical and analytical skills, preparing me to effectively bridge the gap between business needs and IT solutions.

Software Engineer, Tech Mahindra Ltd. (Aug 2019 - July 2022): During my professional tenure, I worked on multiple projects, the major one being Sprint Telecom merger with T-Mobile USA. I was responsible for creating detailed systems documentations to facilitate integration and migration process. I collaborated with technical teams and multiple stakeholders to ensure seamless data migration, leveraging Azure Cloud Services, specifically Azure Data Factory for

secure data movement between legacy systems and T-Mobile's infrastructure. I also used Azure Logic Apps to automate workflows and streamline communication between systems.

Education

George Brown College (2022-2023), Post Graduation in Information Systems Business Analysis, Computing and technology - Dean's List (2022, 2023) - GPA: 3.89/4.0

University of Mumbai (2015-2019), Bachelor of Engineering, Electronics Engineering - GPA: 3.90/4.0 - Class rank: 3rd

Miscellaneous

- Google Data Analytics Professional Certificate
- AZ-104: Microsoft Certified Azure Administrator Associate
- Entry Certificate for Business Analysis (ECBA)
